

Structure–Detail Representation and Paired Training

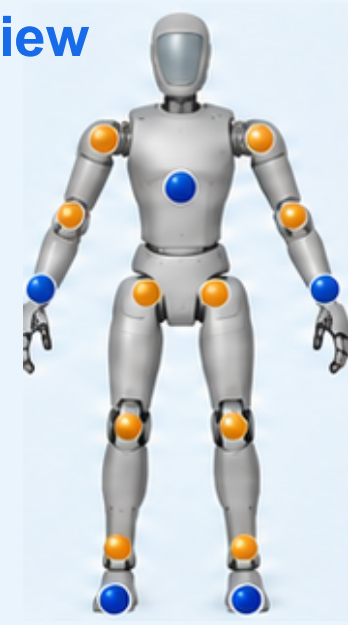

(a) Body-part supervision views

Joint view

- **Structure:** root, legs, waist
- **Detail:** arm joints

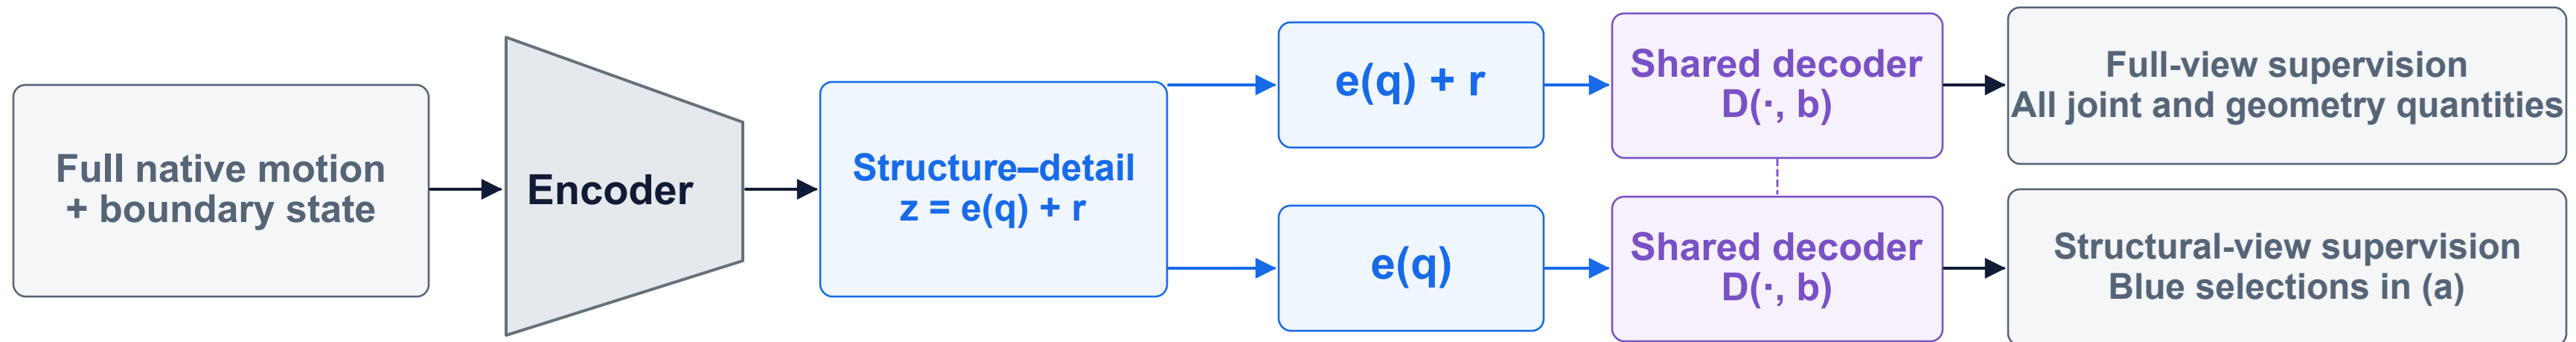

Geometry view

- **Structure:** torso, wrists, soles
- **Detail:** remaining body points

Positions and their velocities use the same partition.

(b) Two principal reconstruction paths

Supervision views guide latent roles; both paths share one decoder.
Full reconstruction also uses boundary-transition supervision.
